## Introduction

- The information contained herein is presented only as a guide for the applications of our products. No responsibility is assumed by SP for any infringements of intellectual property or other rights of the third parties which may result from its use.
- SP is continually making an effort to improve the quality of its products. Nevertheless, semiconductor devices in general can malfunction or fail due to their inherent electrical sensitivity and vulnerability to physical stress. It is the responsibility of the buyer, when utilizing SP products, to comply with the standards of safety in making a safe design for the entire system, and to avoid situations in which a malfunction or failure of such SP products cause loss of human life, bodily injury or damage to property.
- The SP products listed in this document are intended for usage in general electronics (computer, personal equipment, office equipment, industrial robotics, domestic, etc...) These products are neither intended nor warranted for usage in equipment that requires extraordinarily high quality and/or reliability or a malfunction or failure of which may cause loss of human life or bodily injury.
- In developing your designs, please ensure that SP products are used within specified operating ranges as set forth in the most recent SP products specifications.
- Also, please keep in mind of the precautions listed in this document.

**ATTENTION: Electric Static Discharge (ESD) protection**

The symbol shown on the page herein to introduce 'Electro-Optical Characteristics'. ESD protection for GaP and AlGaAs based chips is still necessary even though they are safe in low static-electric discharge. Parts built with AlInGaP, GaN, or/and InGaN based chips are **STATIC SENSITIVE devices**. ESD protection has to considered and taken in the initial design stage. If manual work/process is needed, please ensure the device is well protected from ESD during all the process.

**Product Feature**

- Wide view angle
- Easy to fixed
- No UV
- Long operating time (Up to 50,000hrs)
- Lower forward voltage operated
- More energy efficient than incandescent and most halogen lamps
- ESD: InGaN/Al<sub>2</sub>O<sub>3</sub> with 8KV
- Instant light (less than 100nS)

**LEDs and Eye Safety:**

In the 1993 edition of IEC-60825-1, LEDs were included: “Throughout this part 1 light emitting diodes (LED) are included whenever the word “laser” is used.”The CENELEC document EN 60825-1 contains all the technical content of the IEC standard.

The scope of the IEC standard states that “...products which are sold to other manufacturers for use as components of any system for subsequent sale are not subject to IEC 60825-1, since the final product will itself be subject to this standard. ”Therefore, it is important to determine the Laser Safety Class of the final product. However, it is important that employees working with LEDs are trained to use them safely.

Most of the products containing LEDs will fall in either Class 1 or Class 2. A Class 1 label is optional:

**CLASS 1 LED PRODUCT**

If a label is not used, this description must be included in the information for the user.

Amendment 2 to IEC 60825-1 is expected to be published in January 2001. The CENELEC equivalent is expected to follow three months after the IEC publication. This document contains increased Class 1 and Class 2 limits, as well as the introduction of less restrictive Class 1M and Class 2M.

For the exact classification and further information, the IEC document can be used:

### Packing Model

### Precaution of Application

#### Designing 1: Soldering Pattern

The dimensions of the recommended soldering pattern may not meet every user. Please confirm and study first before designing the soldering pattern in order to obtain the best performance of soldering. Recommended soldering pattern is listed below:

#### Designing 2: Circuit Layout

Official Product	Part No. SP-P178NBH	Your Part No.		Data Sheet No.

### Designing 3: Max Rating

Any application should refer to the specifications of absolute maximum ratings.

### Storage

It's recommended to store the products in the following conditions:

Humidity: 60 %RH Max.

Temperature: 5°C ~30°C (41°F~86°F)

### Soldering

Manual soldering

Soldering tin material: tin 6/4 alloy or contained Ag.

To prevent cracking, please bake before manual soldering.

Temperature at tip of iron : 300°C±5°C Max.(25W)

It's banned to load any stress on the resin during soldering.

Soldering time : 3±1sec

### Cleaning

The conditions of cleaning after soldering:

An alcohol-based solvent such as isopropyl alcohol (IPA) is recommended.

Temperature Time: <50°C×30sec, or <30°C×3min

Ultra sonic cleaning: < 15W/ bath; Bath volume: 1liter max.

Curing: 100°C max, <3min
